

PROFESSIONAL TRAINING • ONLINE • MIDDLE EAST

Greenhouse Gas Emissions Management

ISO 14064 & GHG Protocol • Carbon Footprint Reporting • Climate Projects

As organizations strengthen their climate strategies and respond to evolving reporting requirements, understanding greenhouse-gas accounting has never been more important. This practical, industry-focused programme builds a clear understanding of carbon-accounting principles and their real-world application — navigating international GHG standards, distinguishing organizational and product carbon footprints, and understanding climate projects for credible reporting and informed decision-making. Participants gain the knowledge and tools to perform GHG accounting, develop carbon-footprint assessments, prepare GHG reports and support climate-project implementation.

What's in it for you?

- ✓ Understanding the climate agenda and regulatory landscape in the Middle East
- ✓ Greenhouse-gas emissions assessment and reporting methodologies
- ✓ International GHG standards and verification approaches
- ✓ Corporate carbon-footprint reporting aligned with ISO 14064
- ✓ Product carbon-footprint assessment aligned with ISO 14067
- ✓ GHG removals, emissions reductions and climate-project management

PROGRAMME DETAILS

-  **DATES**
July 9 & 16, 2026
(two consecutive Thursdays)
-  **TIME**
9:00 AM – 5:00 PM
(Dubai time)
-  **LOCATION**
Online — live virtual classroom
-  **FORMAT**
Instructor-led, practice-oriented
with final assessment

Who should attend?

Sustainability, ESG & EHS managers • carbon and energy analysts • consultants, auditors & compliance officers • finance, procurement & operations professionals seeking credible carbon reporting.

Seats are intentionally limited to ensure quality engagement and a personalized learning experience — reserve your place early.
